## Radian Announces New 950 PB Compression Driver

ORANGE, Calif. – Radian introduces the new 950 PB, a 2” exit throat neodymium compression driver with ultra-low distortion to produce clean high-frequency sound.

The 950 PB’s wide frequency response range (500 Hz – 20 kHz) and 100 watt RMS power handling capacity make it ideal for live sound applications that require transparent high frequencies at extreme SPL levels. The Radian 950 PB also utilizes its proprietary Mylar diaphragm suspension with pure aluminum dome, greatly reducing 2<sup>nd</sup> and 3<sup>rd</sup> harmonic distortion resulting in extremely clean, less fatiguing sound. Other features include a 4” voice coil for high power-handling capacity, 8- or 16-ohm impedance rating, and light weight of 10.4 lb (4.7kg).

The 950 PB is expected to be shipping in August 2000.

Radian Audio Engineering, Inc. is a leading manufacturer of loudspeakers and speaker components for permanent sound systems and live sound applications.
